TECHNICAL SKILLS

Languages & Querying

- Python (Pandas, NumPy, Scikit-learn)
- SQL / MySQL
- Advanced Excel & Power Query

Visualisation & BI

- Power BI (DAX, Dashboards)
- Matplotlib / Seaborn

Analytics & ML

- Exploratory Data Analysis
- Predictive Modeling (ML)
- RFM Customer Segmentation
- A/B Testing & Experimentation
- Statistical Analysis

Tools & Workflow

- Git & GitHub
- Jupyter Notebook
- Google Sheets

EDUCATION

BCA — Computer Applications

RKGIT, Ghaziabad
Expected: Jun 2027

Senior Secondary (CBSE)

St. Francis Convent, Bareilly
Jun 2023

PROFILE

Data Analyst with a proven track record of building end-to-end analytics and ML pipelines across Python, SQL, and Power BI. Delivered projects spanning 7,000+ customer records, predictive churn modeling at 81% accuracy, RFM customer segmentation, and multi-page executive dashboards — each tied to a measurable business outcome. Skilled at translating ambiguous data into clear, decision-ready insights that drive retention, revenue, and operational efficiency. Seeking internship / entry-level Data Analyst roles at high-growth or product-led organisations where rigorous, scalable analytics work matters.

PROJECTS

Customer Churn Analysis & Prediction [GitHub ↗]

Python • SQL • Scikit-learn • Power BI • Logistic Regression

- Built end-to-end ML + analytics pipeline on **IBM Telco dataset (7,043 records)** — data cleaning, EDA, SQL analysis, and feature engineering.
- Achieved **81.37% prediction accuracy** (Precision: 0.70, Recall: 0.58) via Logistic Regression; identified month-to-month contracts and electronic check payments as top churn drivers.
- Delivered a **4-page Power BI dashboard**: Executive Overview, Demographics, Churn Drivers & Revenue Analysis, and ML Insights — enabling C-suite retention decisions.
- Applied **feature importance analysis** to surface retention levers: fiber optic users, seniors, and customers lacking tech support showed highest churn probability.

E-Commerce Sales & Customer Analytics [GitHub ↗]

Python • Pandas • MySQL • Power BI • RFM Segmentation

- Analysed **4,000+ real-world e-commerce transactions** across customers, products, and countries to surface revenue and behavioural insights.
- Performed **RFM-based customer segmentation** — classified customers into VIP, Loyal, At-Risk, and Lost cohorts to prioritise retention and re-engagement strategies.
- Built interactive Power BI dashboards covering monthly revenue trends, top-performing products by country, and customer lifetime behaviour patterns.
- Wrote **advanced SQL queries** for cohort-level aggregations, revenue growth analysis, and customer ranking across segments.

SQL Data Cleaning & EDA — Global Layoffs Dataset [GitHub ↗]

MySQL • CTEs • Window Functions • EDA

- Cleaned **2,361 layoff records across 20+ industries** — resolved duplicates, null values, inconsistent text, and date format issues using a staging table workflow.
- Conducted comprehensive EDA using **CTEs, subqueries, aggregate functions, and window functions** to uncover industry-wise and regional layoff trends (2020–2023).
- Identified that consumer and retail sectors led layoffs, with the US contributing highest records — applicable to **workforce planning and economic analysis**.
