TECHNICAL SKILLS

Languages & Querying

- Python (Pandas, NumPy)
- SQL / MySQL
- Advanced Excel & Power Query

Visualization & BI

- Power BI (DAX, Dashboards)
- Matplotlib / Seaborn

Analytics & Modeling

- Exploratory Data Analysis
- Predictive Modeling (ML)
- RFM Customer Segmentation
- Business Analytics
- Statistical Analysis

EDUCATION

BCA — Computer Applications

RKGIT, Ghaziabad

Expected: Jun 2027

Senior Secondary (CBSE)

St. Francis Convent, Bareilly

Jun 2023

LANGUAGES

- English
- Hindi

PROFILE

Data Analyst with hands-on experience building end-to-end analytics pipelines across SQL, Python, and Power BI. Delivered projects spanning 7,000+ customer records, predictive churn modeling (81% accuracy), RFM customer segmentation, and multi-page executive dashboards. Focused on real-world business impact — translating raw data into decisions. Seeking internship / entry-level roles to apply data-driven problem-solving in fast-paced environments.

PROJECTS

Customer Churn Analysis & Prediction [\[GitHub ↗\]](#)

github.com/VidbTheAnalyst/customer-churn-analysis

Python • SQL • Scikit-learn • Power BI • Logistic Regression

- ▶ Built end-to-end ML + analytics pipeline on **IBM Telco dataset (7,043 records)** — covering data cleaning, EDA, SQL analysis, and feature engineering.
- ▶ Achieved **81.37% prediction accuracy** (Precision: 0.70, Recall: 0.58) via Logistic Regression with StandardScaler; identified month-to-month contracts and electronic check payments as top churn drivers.
- ▶ Delivered a **4-page Power BI dashboard**: Executive Overview, Demographics, Churn Drivers & Revenue Analysis, and ML Insights — enabling retention strategy decisions.
- ▶ Applied **feature importance analysis** to surface actionable retention levers: fiber optic users, seniors, and customers lacking tech support showed highest churn probability.

E-Commerce Sales & Customer Analytics [\[GitHub ↗\]](#)

github.com/VidbTheAnalyst/Ecommerce-Analytics-Project

Python • Pandas • MySQL • Power BI • RFM Segmentation

- ▶ Analyzed **4,000+ real-world e-commerce transactions** across customers, products, and countries to surface revenue and behavior insights.
- ▶ Performed **RFM-based customer segmentation** — classified customers into VIP, Loyal, At-Risk, and Lost cohorts to prioritize retention and re-engagement strategies.
- ▶ Built **interactive Power BI dashboards** covering monthly revenue trends, top-performing products by country, and customer lifetime behavior patterns.
- ▶ Wrote advanced SQL queries for cohort-level aggregations, revenue growth analysis, and customer ranking across segments.

SQL Data Cleaning & EDA — Global Layoffs Dataset [\[GitHub ↗\]](#)

github.com/VidbTheAnalyst/SQL-DataCleaning-Project

MySQL • CTEs • Window Functions • EDA

- ▶ Cleaned **2,361 layoff records across 20+ industries** — resolved duplicates, null values, inconsistent text, and date format issues using a staging table workflow.
- ▶ Conducted comprehensive EDA using **CTEs, subqueries, aggregate functions, and window functions** to uncover industry-wise and regional layoff trends (2020–2023).
- ▶ Identified that the **consumer and retail sectors** led layoffs, with the US contributing the highest records — findings useful for workforce planning and economic analysis.
